

# Take the Step. Ensure your business continuity today!

Unplanned downtime costs more than you think!  
A staggering 82% of business found out the hard way.

## The new frontier for business.

Exacerbating cost pressures, distributed renewable generation, new digital technologies and changing consumer expectations are creating a new energy world that is more complex, competitive, and challenging.

Our customers expect that Intelli-Systems will reduce their risk of downtime for their Critical Environments. So, we upped the ante to create even more value.

**What would it mean** to your business if you could optimize your Critical Environment to tangibly reduce carbon emissions by **up to 30%**?

**Why would you up pass** the opportunity to remove stranded capacity from your Critical Environment and save **up to 60%** in operating costs?

**What if you could** safely modernize your Critical Environment without business interruption and increase project agility by **up to 30%**?

Our mission is to design, build and operate Critical Environments that support highly controlled processes to protect assets and safeguard life.

**We make it our business to understand your business.**

## Proactive CE monitoring can mean the difference between a Sev 3 or a Sev 1 Incident.

Remediation once an incident has occurred is stressful particularly if you are responsible for the Critical Environment. But, with proactive device monitoring paired with advanced machine learning, you can radically reduce your risk of failure and focus instead on planned maintenance.

If you are responsible for a business critical function, a generic SNMP based service will fail your expectation. Working with a Specialist to tune the right system alerts will mean timely advice, controlled change and minimal false positives.

Lack of real time visibility into operations and inefficient maintenance is a BIG contributor to downtime!

**Why not consider our preventative maintenance service to upgrade your monitoring service?**

**So, what does a specialist service include?**

- ✓ **Installation and configuration** of the Client software to serve as the collector of any alerts
- ✓ **Setting** target thresholds for each component of the device and **tuning** the software to monitor alerts considering the operating environment of the device
- ✓ **Prioritizing alerts** to ensure most critical alarms are identified earlier with a focus on minimizing false positives
- ✓ **In real-time reporting** of any threshold breaches and a follow up by a specialist.
- ❖ **Upgrade Option** for incident management and remediation support available subjected to contracted Service Level Agreement
- ❖ **Upgrade Option** for root cause analysis and problem management
- ❖ **Upgrade Option** for asset lifecycle oversight and configuration management

*Modernizing their UPS enabled their ESG mandate and put them ahead of their competition*

*"Intelli's design delivered a 2% ~ 3% improvement in system efficiency translating to a 30% improvement in our energy saving and a lowering of CO2 emissions by 30% without which we will have failed our ESG goals."*

A multinational pharmaceutical – IT Director

*Auditing their Critical Environment identified stranded capacity that was costing them \$\$\$\$\$*

*"We saved nearly 60% in utility and real estate related costs in the first year post implementation. Intelli-System's proactive monitoring and maintenance plan has helped us remove stranded capacity in our power system"*

A major government agency.

*When you have a ticking time bomb but don't know where to start. A specialist makes the difference.*

*"My 10 year old data center design was a ticking time bomb and delaying our program for transformation, but I didn't know where to start until I met the team at Intelli-Systems. I could tell that they had the right experience to plan our program and work through the unknown."*

A regional broadcaster and media house

# Where old-fashioned customer service meets unrivalled technical expertise.

## We prioritize your goals, so our recommendation becomes your solution.

Our customers and partners support our incumbency because of our openness to collaborate, our specialized focus, foundation in integrity and our commitment to excellence.

Our proprietary knowledge and reporting platform, **Intelli-Reports™** ensures we have the best information in real-time to support you.

We are a specialist Australian service provider specializing in design, supply implementation, maintenance and life cycle management of Critical Environment infrastructure:

- ✓ UPS & generators,
- ✓ precision cooling,
- ✓ fire suppression,
- ✓ surveillance, and
- ✓ access control

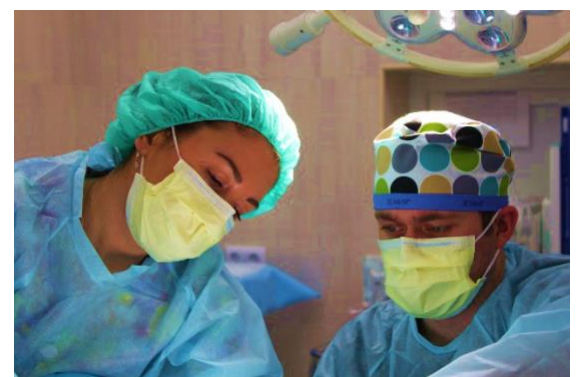

that supports ICT workloads in a *datacenter* OR automation in *industrial plants* OR life preservation in *healthcare*, OR security and surveillance in *commercial spaces*.

Our core team of 15 professionals together with our trained partner network are available to support your site anywhere across Australia, be it a bespoke Critical Environment supporting a single application, through to multiple sites or a large complex setup supporting multiple applications.

## We invest proactively in our industry alliances...

Together with OEM's, Facility Management firms, System Integrators and major consulting firms, we provide you with access to the best technology, diverse experience and the broadest range of skills covering IT and non-IT applications.

# Your Critical Environment has a 10 Year asset life. Are you getting the most out of it?

Most modernization projects are closed after the first year of implementation but in our opinion, this is when our partnership begins. Our customers trust us to be there for them for the full term; to support them through the promise of new opportunity, the complexity of change, the pain of failure and the fulfilment from achievement.

**Why not ring us on 1300 044 944 and speak to our team today?**

Our **Audit & Design** services can help you uncover safety concerns and save money | Our industry partnerships ensure we can **Supply & Install** the best solutions so you achieve your goals | Our in-house technicians will help you **Maintain and Remediate** the trickiest faults | Our **Managed Services** will ensure you can plan for scale and eliminate risk
