

We are committed and responsible for the protection and improvement of our Environment

Intelli-Systems is committed to sustainability across all areas of our business operations and the services we deliver. We encourage our employees, business partners and customers of the wider community to share that same commitment. We choose to work with likeminded individuals and organizations who share a similar vision and responsibility.

At Intelli-Systems, we aim to actively measure and reduce, any waste across all business operations which extends to designing and implementing solutions for our customers. Our policies outline our commitment to our Environmental, Social and Governance responsibility and that which we use as a means for our employees, our customers, and our partners to collaborate to protect and improve our ecosystem.

Our aim is to focus on the challenges and opportunities that most impact the datacentre infrastructure sectors in which we operate, delivering scope for lower emissions and reduced wastage across every aspect of datacentre infrastructure including materials and circularity, predictive maintenance, and proactive asset life-cycle management. Intelli-Systems is committed to continual improvement in accordance with our business strategy and the requirements of ISO 14001:2015 Environment Management Systems.
